

Topic: Animals

1. Smaller organisms, including probaryotes, can consist of what type of cells?

- life
- consist of small single cells
- refer to matter that has biological processes
- also known as biota

2. On which planet lies life, as well as the water and organisms?

- Life exists all over the Earth in air
- Grace Hopper
- Dennis Ritchie
- Alan Turing

3. What are all living things comprised of?

- life
- also known as biota
- Living things are composed of biochemical molecules
- refer to matter that has biological processes

4. The organism referred to as smaller organisms may consist of what?

- consist of small single cells
- life
- also known as biota
- refer to matter that has biological processes

5. What include bacteria and archaea?

- also known as biota
- refer to matter that has biological processes
- including prokaryotes
- life

Answer Key

1. consist of small single cells
2. Life exists all over the Earth in air
3. Living things are composed of biochemical molecules
4. consist of small single cells
5. including prokaryotes
